

VP SERIES

ARIES / VAPONICS® / BARNSTEAD® REPLACEMENTS

SERIES OVERVIEW

VP Series cartridges provide ultra high purity filtration for a variety of applications. Constructed of non-pigmented, virgin materials the spin welded construction provides the longest life and highest quality. Applications include deionization, submicron filtration, organics, chlorine, oxygen and amine removal.

Standard filters fit all ARIES, UNIX and Vaponics systems and are compatible with Barnstead® PCS® systems. Hose nipple end caps have tapered ends for easy connections. Straight nipple tube ends can be used with any 3/8" compression or tubing fitting. Threaded 1/8" male npt connections are also available.

Filter length can be easily modified for custom applications and clear tubes are available for color changing medias. Combination cartridges offer multiple stages of filtration in a single filter.
